Summary

I am a result driven Front End Developer specializing in User Interface Design and Web development. I excel at developing responsive web applications across devices, optimizing usability, and designing digital media that expresses core brand values. I produce high quality output without cutting corners, and turn over deliverables that exceed expectations.

Work Experience

Brooksource Employment Agency Farmington Hills, MI

Front End Developer

December, 2017 – May, 2018

Contracted with Cengage Learning, developing the front end of a large scale web application, assisted with other web projects and managed four Wordpress sites.

- Developed the front end of the third version of a dynamic web application, using Javascript, HTML, and CSS.
- Redesigned the style of the application to be fully responsive, while modernizing the look and feel of the previous version.
- Worked with multiple groups across Cengage, providing support, and completing front end development tasks. Received praise for providing excellent service and delivering high quality results.
- Created and implemented an interactive "Like Button Counter" that is now live on the company website.
- Trained my supervisor on various "modern" CSS practices, and how to organize a the front end code structure in a way that works.
- Updated front end components and plugins for four different Cengage blogs: <http://blog.cengage.com>, <http://news.cengage.com>, <http://blog.cengagebrain.com/blog>, and <http://www.webassign.com>

Examined Living Enterprises, LLC Brighton, MI

CEO / Developer

February, 2009 – December, 2017

Created and managed a web development / design business, working with a range of clients and development environments.

- Created multiple responsive full-stack websites using PHP, HTML, CSS, and Javascript. All sites function on all devices with the same code base
- Developed multiple Wordpress UI plugins including a nested checkbox plugin correlating to blog categories with a custom checkbox UI; a color picker that modifies the theme for the entire front-end; and a user home page designed to accommodate a variety of different looks
- Created a custom image gallery with lazily loaded images, modal lightboxes, and a simple navigation system. Visible at [<http://morrisonforyou.com/gallery>]
- Engineered a custom set of UI components that display an image or video and social media buttons in addition to user defined text in for one of several different UI "card" components. The data is displayed in a responsive manner, independent of the length of the text or the dimensions/aspect ratio of the media. Designed modularly from PHP Classes and ported to a Wordpress plugin
- Skilled with graphic design. Examples of graphics I created can be viewed at [<https://dlgombert.github.io/#projects>] - I designed the vector images that serve as links to the projects they represent
- Built an iPhone Application with an interactive vector map and homemade front-end UI. Give it a whirl - [<https://itunes.apple.com/us/app/sfarch/id792066981?mt=8>]
- Developed a modular build system using gulp.js, storing tasks in separate files. The system is project independent and can easily be configure with a simple JSON file to support multiple project environments
- Developed a system to programmatically build resumes from external data, outputted in PDF or DOCX format. You are looking at the output of that project

Landmark Worldwide Livonia, MI
Center Manager
 July, 2003 - February, 2008

Managed the Detroit Center of an international training and development company.

- Managed office budget and ensured financial growth
- Accountable for meeting or exceeding daily, weekly, and quarterly sales targets
- Led sales presentations to large audiences
- Led training and development programs for customers and staff
- Accountable for staffing courses and group events, as well seamless event management and presentation
